EARTHLIVE

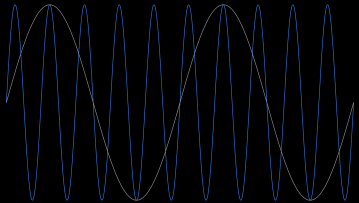
Dynamic Ground Truth. Live from Space.

vitezengineering.com/earthlive

The Problem

Static imagery is historical data.

- **The Blind Spot:** Orbital assets currently provide snapshots of the *past*. High tasking latency creates critical gaps for defense and emergency response, leading to the wrong conclusions.
- **The Intelligence Lag:** Decisions in 2026 require what is happening *now*, not what happened six hours ago.
- **The AI Bottleneck:** Earth observation models are starved for temporal data...they understand pixels, but not the *physics* of motion.



The Solution

Planetary Situational Awareness

- **Real-Time Telemetry:** Sub-meter resolution video streamed directly from orbit.
- **Continuous Tracking:** Persistent optical monitoring of high-value assets across contested or remote environments.
- **Zero Latency:** Moving Earth observation from a "request and wait" model to a "live feed" model.
- **Fast Tasking:** Get live video anywhere on Earth within one minute of clicking one button.

Technical DNA

Engineered for the reality of orbit.

- **Low Altitude:** Lower altitude orbit means higher quality video for the same camera.
- **Agile Sats:** Secret sauce is vehicle agility. More agility means less downtime slewing. Less downtime means more live video.
- **RF Crosslinks:** Low-latency data streaming over the entire constellation, with or without direct groundstation coverage.

The Ultimate Moat

Foundation Models for Physical AI

- We aren't just selling video; we are building the **training set for Physical AGI**.
- High-temporal-resolution data teaches models **causality, flow, and physics**.
- EarthLive provides the data pipeline for the next generation of spatial intelligence.

REAL-TIME
FLOW

Applications

Defense & Intelligence

- Tactical tracking in contested zones.
- Maritime "Dark Ship" detection.

Disaster Response

- Live wildfire front monitoring.
- Active flood crest routing.

Economic Alpha

- Real-time industrial throughput.
- Global chokepoint auditing.

Infrastructure

- Urban flow and bottleneck analysis.
- Environmental enforcement.

Team

Cory Vitez

Founder

Background

- **Varda Space Industries:** GNC Engineer; Led GNC for first successful commercial spacecraft reentry into Australia (W2).
- **ABL Space Systems:** GNC Engineer; GNC Orbit & Trajectory Design.
- **Purdue University:** Won "Outstanding Aerospace Engineer" award given to top aerospace engineering student.
- **Fun Fact:** Walked 2650 miles from Mexico to Canada.
